EVALUATING & MANIPULATING ELEMENTS

ATTRIBUTES VS PROPERTIES

Ko'pincha (lekin har doim emas!), atributlar property'larga ko'chiriladi va "jonli sinxronizatsiya" o'rnatiladi.

```
<input id="input-1" class="input-default" value="Enter text...">
```

Atributlar (HTML kodida, element teglarida joylashtirilgan)

1:1 mapping (+ live-sync)

boshqa nom (but live-sync)

1:1 mapping (1-way live-sync)

const input

input.id

input.className

input.value

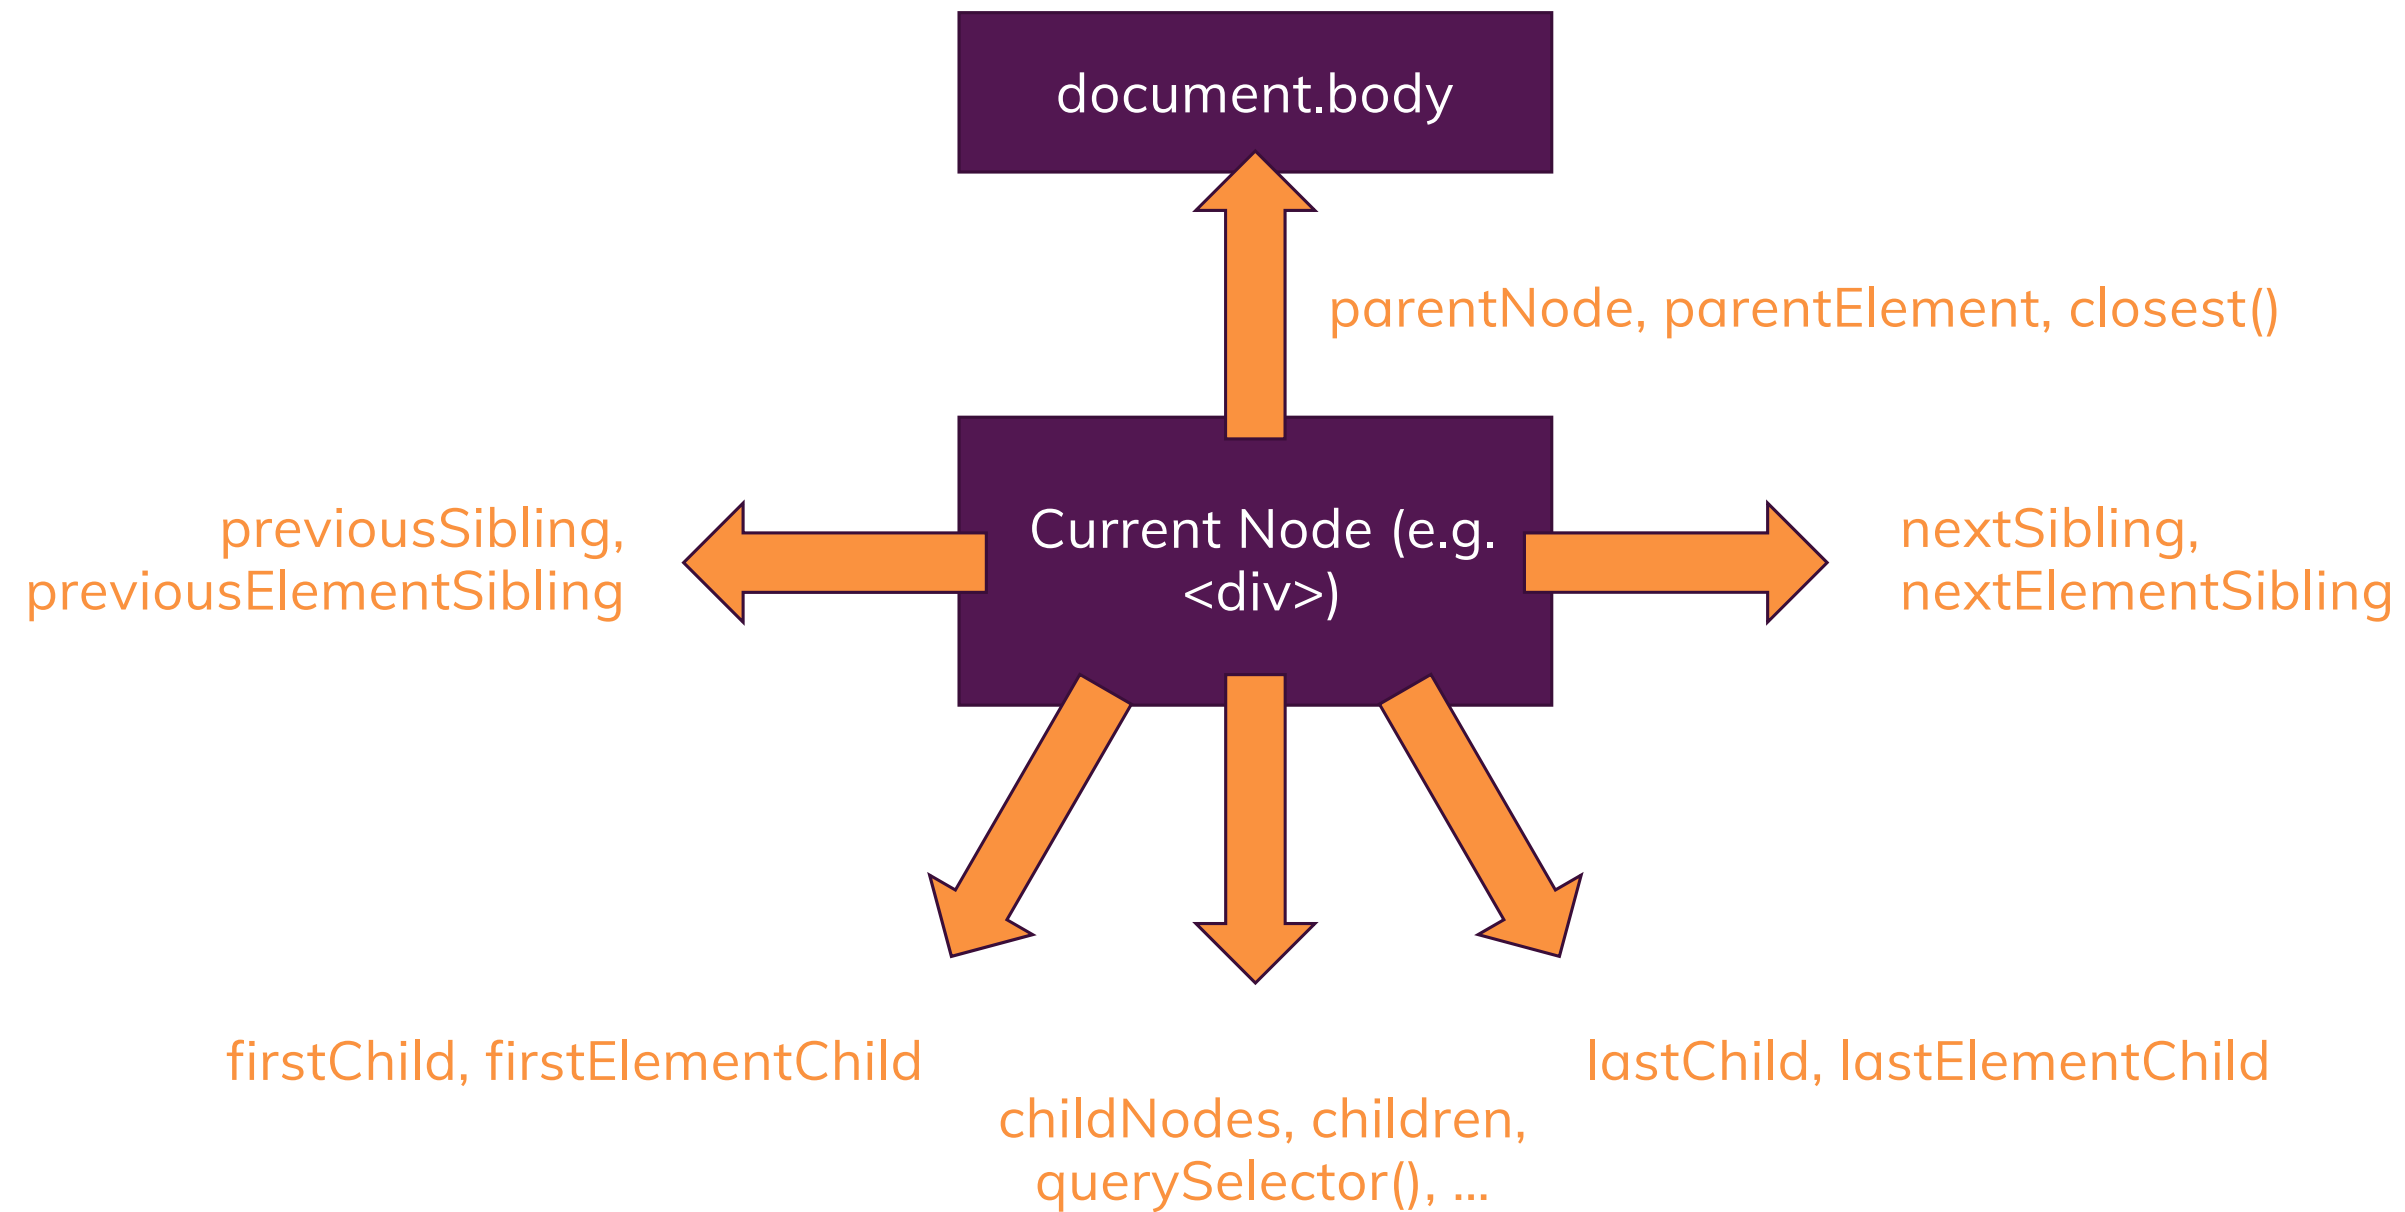

Mavjud xususiyatlar + ularning xatti-harakatlari haqida to'liq ma'lumot olish uchun MDN!

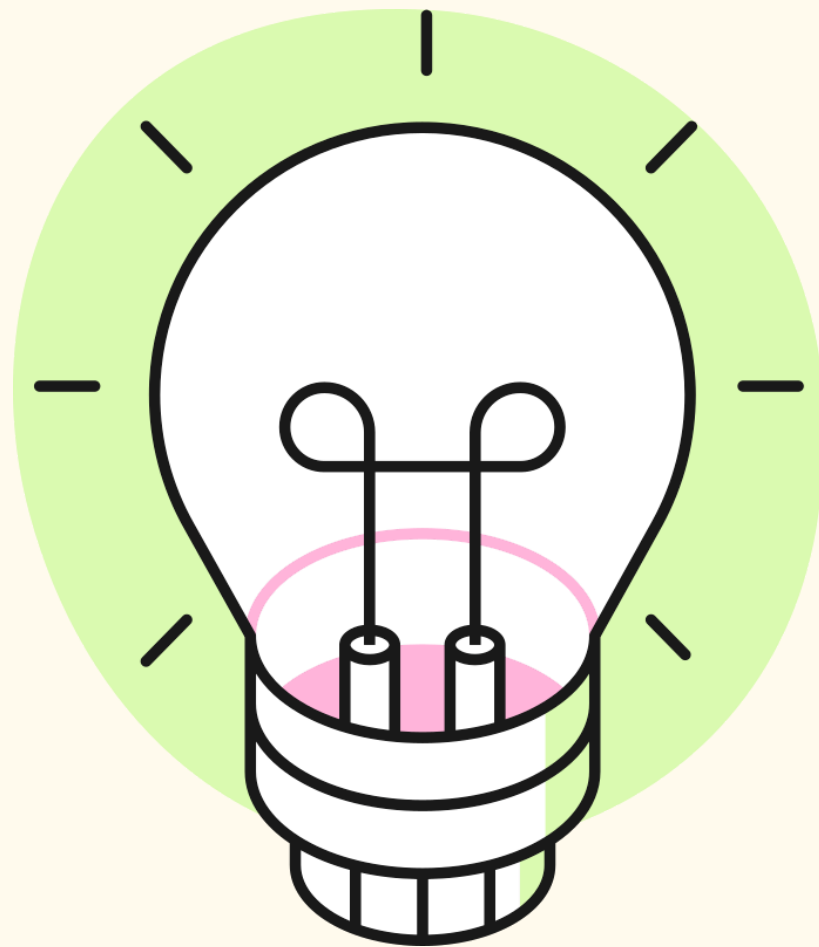

Property'lar (yaratilgan DOM obyektlariga avtomatik ravishda qo'shiladi)

CHILDREN, DESCENDANTS, PARENT & ANCESTORS

Child	Descendant	Parent	Ancestor
Direct child node or element	Direct or indirect child node or element	Direct parent node or element	Direct or indirect parent node/element
<pre><div> <p> A test! </p> </div></pre> 	<pre><div> <p> A test! </p> </div></pre> 	<pre><div> <p> A test! </p> </div></pre> 	<pre><div> <p> A test! </p> </div></pre> 
<p><p> <div>'ning childi. esa yo'q!</p>	<p><p> va <div>'ning descendenti.</p>	<p><div> <p>'ning parenti ammo ning emas!</p>	<p><div> <p> va 'ning ancestori!</p>

TRAVERSING THE DOM

XULOSA

1. Elementlarni manipulyatsiya qilish
2. Attributes vs Properties
3. Bir-qancha elementlarni tanlash
4. Little practice
5. Children, Descendants, Parent & Ancestors
6. DOM orqali aloqa/o'tish
7. Child node lar bilan aloqa
