Teacher: Jamshid

CONDITIONAL CODE EXECUTION

BOOLEAN OPERTORS

Holat kodlari uchun muhim: Return true or false

==	Qiymat tengligini tekshiradi	e.g. a == b
!=	Qiymat teng emasligini tekshiradi	e.g. a != b
Ustunroq == === and !==	Qiymatning tipini va teng (emas) ligini tekshiradi	e.g. a === b a !== b
> & <	Qiymatning katta yoki kichikligini tekshiradi	e.g. a > b a < b
>= & <=	Qiymatning teng yoki katta (kichik) ligini tekshiradi	e.g. a >= b a <= b
!	True bo'lmasligini tekshiradi	e.g. !a

ORDER OF EXECUTION

```
1  if (someCondition) { // true
2    // code
3  } else { // false
4    // code
5  }
```

```
1  if (someCondition) { // true
2    // code
3  } else if (otherCondition) { // true
4    // code
5  } else { // false
6    // code
7  }
```

OBJECT AND ARRAY EQUALITY

{ name: 'Max' }

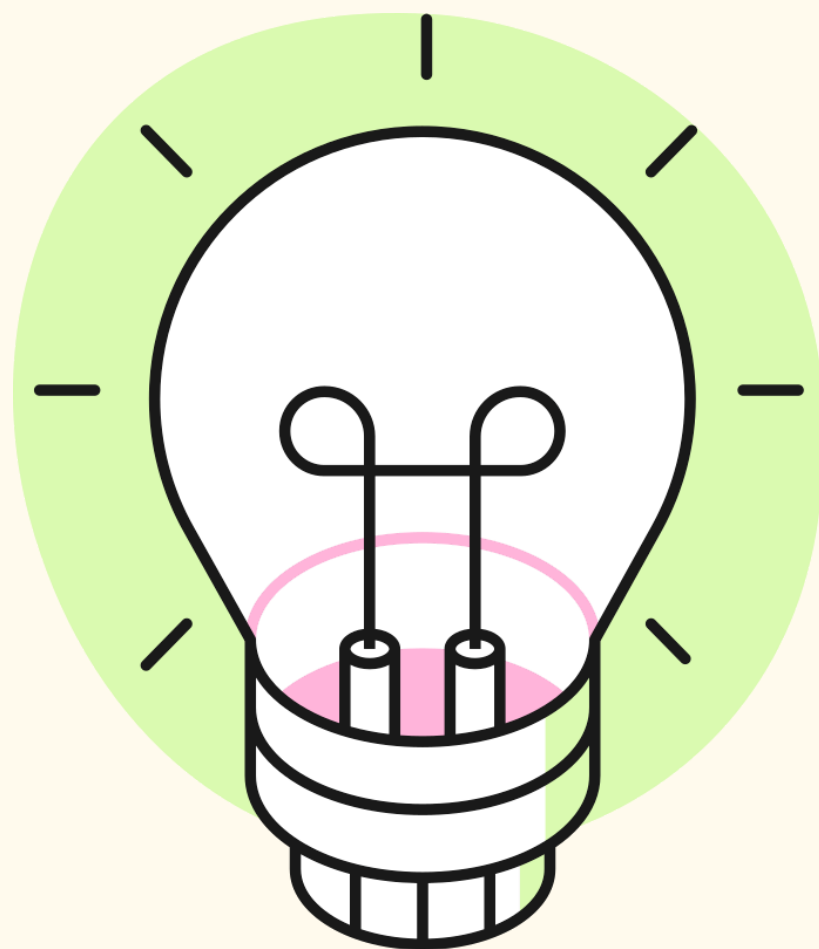

=== yoki ==

{ name: 'Max' }

~~true?~~

false!

Obyekt va Arraylar Javascriptning maxsus tip lari

XULOSA

1. Holatga qarab kodni ishga tushirish
2. Boolean operatorlari haqida
3. Kodni ishlash tartibi
4. If bilan ishlash
5. If, if-else, else-if lar bilan ishlash
6. Obyekt va Array tengligi
