# TERNARY OPERATOR

"if statement" lari qiymat qaytarmaydi

Bu Ishlamaydi!

```
const userName = if (isLogin){  
  return 'Max';  
} else {  
  return null;  
}
```

Bunday vaziyatlarda "ternary operatori"dan foydalaning

```
const userName= isLogin ? 'Max' : null
```

holatlar if niki singari bir xil  
tartibda yozilishi mumkin

agar qiymat  
true/truth bo'lsa

agar qiymat  
false/falsy bo'lsa

# “BOOLEAN TRICKS” WITH LOGICAL OPERATORS

Boolean tipiga o'tish "double not" ("double bang") operatori bilan

!!

!!“”, !!1

false, true

OR operatori bilan standard qiymat berish

||

const name =  
someInput || 'Max'

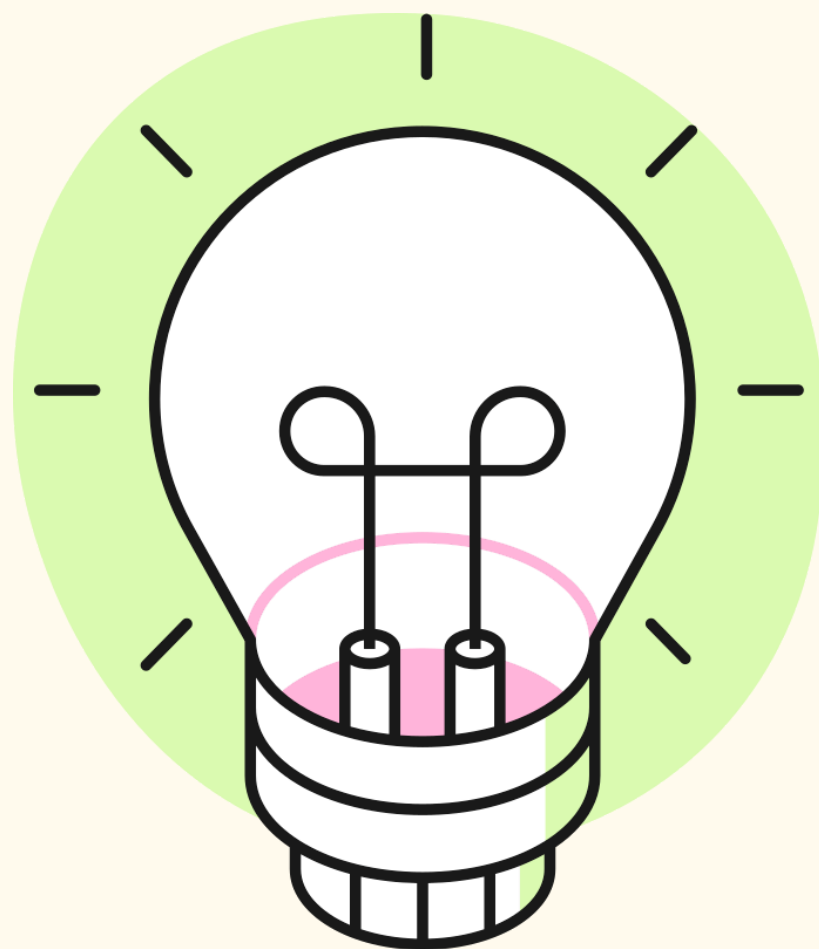

agar someInput false  
bo'lmasa, teskarisi  
bo'lsa 'Max'

agar holat to'g'ri bo'lsa AND operatori orqali qiymatni ishlatish

&&

const name =  
isLoggedIn && 'Max'

agar isLoggedIn  
true bo'lsa 'Max'  
qiymati beriladi,  
aksincha esa false

# XULOSA

1. Ternary operator
2. Expression va statement ni tushinish
3. Logik operatorlar bilan "Boolean hiylalar"
4. Logik operatorlar - Qisqacha xulosa
5. switch case
